

Effective from Session: 2016	5-17												
Course Code	BM 226	Title of the Course	Human Values & Professional Ethics	L	T	P	C						
Year	II	Semester	III	3	1	0	4						
Pre-Requisite	None	Co-requisite	None										
Course Objectives	To develop th	ne ability to distinguish l	between what is of value and what is superficial in life. To d	evelop	the ab	ility to	face						
Course Objectives	difficult situations in life boldly and resolve them confidently.												

	Course Outcomes
CO1	Know about the concepts of database, their types, design concepts and ER-models
CO2	Know about the concepts of relational databases, working with SQL for frontend development
CO3	Know about the concepts of query optimization, transaction processing and concurrency control
CO4	Know about the concepts of database technologies, distributed database environment
CO5	Know about the concept of data warehouse, data cleaning and data integration

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Human Value Education	Understanding the need, basic guidelines, content and process for Value Education, Self-Exploration - Its content and process; 'Natural Acceptance' and Experiential Validation- as the mechanism for self-exploration, Continuous Happiness and Prosperity- A look at basic Human Aspirations, Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority, Understanding Happiness and Prosperity correctly.	6	1
2	Introduction to Ethical Concept	Definition of industrial ethics and values, Ethical rules of industrial worker. Values and Value Judgments. Moral Rights and Moral rules, Moral character and responsibilities. Privacy, Confidentiality, Intellectual Property and the Law. Ethics as Law	6	2
3	Professional Responsibility	The basis and scope of Professional Responsibility, Professions and Norms of Professional Conduct, Ethical Standards versus Profession, Culpable mistakes, the Autonomy of professions and codes of ethics. Employee status and Professionalism. Central Professional Responsibilities of Engineers: The emerging consensus on the Responsibility for safety among engineers, hazards and risks.	6	3
4	Engineers Ethics	Senses of 'Engineering Ethics' - variety of moral issues - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy - Models of Professional Roles- theories about right action - Self-interest - customs and religion - uses of ethical theories. Valuing Time - Co- operation - Commitment	6	4
5	Global Issues	A Glimpse of Life Stories: Life story of Prophet Mohammad, Mahatma Gandhi, Swami Vivekanand, Marie Curie and Steve Jobs. Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors - moral leadership.	6	5

	Course Outcomes
	Course Outcomes
CO1	Describe the basics of Data structure operation and programming implementation skills
CO2	Stack and Queue and various application based on these data structures
CO3	Learning the different types of trees and learn its augmentation to control the operation complexity.
CO4	Learn different sorting and searching algorithms and analyze their performances.
CO5	Learning File and record management, implementing various searching and routing applications on graph.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to Data Structures	Basic Terminology, Elementary Data Organization, Data Structure Operations. Algorithms, Analysis of Algorithms, Complexity of Algorithms, Time-Space Tradeoff. Arrays: Array Definition, Representation and Analysis, Single and Multi-Dimensional Arrays, Address Calculation, Application of Arrays, Character String Representation, Character String Operation, Sparse Matrices & Vectors. Linked List: Representation and Implementation of Singly Linked List, Traversing, Searching of Linked List, Insertion & Deletion to/from Linked List, Underflow & Overflow. Circular Linked List, Doubly Linked List, Two- way Header List, Polynomial Representation & Addition, Generalized Linked List, Garbage Collection and Compaction.	9	1
2	Stacks	Array Representation and Implementation of Stack, Operations on Stacks: Push & Pop, Linked Representation of Stack, Application of Stack: Conversion of Infix to Prefix and Postfix Expressions, Evaluation of Postfix Expression using Stack. Recursion: Recursive Definition and Processes, Recursion in C, Example of Recursion, Tower of Hanoi Problem. Queues: Array and Linked Representation and Implementation of Queues, Operations on Queue: Create, Add, Delete, Full and Empty; Circular Queues, D-queues and Priority Queues.	9	2
3	Trees	Basic Terminology, Binary Trees, Binary Tree Representation, Algebraic Expressions, Complete Binary Tree, Extended Binary Trees, Array and Linked Representation of Binary Trees, Traversing Binary Trees, Threaded Binary Trees, Traversing Threaded Binary Trees, Huffman Algorithm, Binary Search Tree (BST), Insertion and Deletion in BST, Path Length, AVL Trees, B-trees.	8	3
4	Searching and Hashing	Sequential Search, Binary Search, Comparison and Analysis, Hash Table, Hash Functions, Collision Resolution Strategies, Hash Table Implementation. Sorting: Insertion Sort, Bubble Sort, Quick Sort, Two Way Merge Sort, Heap Sort.	7	4
5	Graphs	Terminology & Representations, Graphs & Multi-Graphs, Directed Graphs, Sequential Representations of Graphs, Adjacency Matrices, Traversal, Connected Component and Spanning Trees, Minimum Cost Spanning Trees. File Handling: Physical Storage Media File Organization, Organization of Records into Blocks, Sequential Files, Indexing and Hashing, Primary Indices, Secondary Indices	7	5

			puter, their interconnection and data representation techniqu	ies in o	compute	er syste	ms
	• To	assess the working of C	PU and become familiar with computer arithmetic's.				
Course Objectives	• Uno	derstand the control unit	design using hardwired and micro programmed approach.				
	• To	study the memory orgar	nization and articulate design issues in each element of mem-	ory hie	erarchy.		
	• Uno	derstand the input outpu	t organization, data transfer, and modes of communication.				

	Course Outcomes
CO1	Describe the basic organization of computer and data representation techniques used in computer systems.
CO2	Use the computer arithmetic in designing of CPU.
CO3	Design the control unit using hardwired and micro programmed approach.
CO4	Resolve the issues arising in the design of elements of memory hierarchy.
CO5	Design the input output organization and resolve the issues arising in data transfer.

Course Objectives	 To understand the concepts of mathematical form. Can identify To learn the Boolean Expression circuit including gates, adders, so To learn the analysis of various so To understand the concept and do To understand the concepts of various mand various memories. 	v type of complements, on, K- Map method. To ubtractor, multiplexer a sequential circuits, flip lesign of asynchronous	can apply 1's and 2's compleme understand the basic concepts and encoders. flops, counters and various shift sequential logic.	ents. of vari t regist	ous con	mbinatio	onal

	Course Outcomes
CO1	Given a number, students shall be able to represent various conversion in mathematical form, identify type of complements, apply 1's and 2's complements and formulate conversion of any radix to decimal and decimal to any radix and solve 1's, 2's, 9's and 10's complements.
CO2	Given a Boolean Expression, student shall be able to analyze and evaluate various axioms and theorems also K- Map method. For a given Combinational circuit, student shall be able to understand its various building blocks and examine, analyze and evaluate various gates, adders, subtractor, multiplexer and encoders.
CO3	Given concept of sequential logic would be able to select suitable design of various flip flops, shift registers and counters.
CO4	Given concept of asynchronous sequential logic would be able to understand and analyze transition table, flow table, reduction of states and circuit with latches.
CO5	Given a AND and OR array, student shall be able to define various logic devices. Solve, analyze, and modify different PLD based design.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Boolean algebra and Number System	Digital System and Binary Numbers: Singed binary numbers, fixed and floating-point numbers, binary codes, cyclic codes, gray codes, error detecting and correcting codes, parity check and Hamming codes. Boolean Algebra and logic gates: Basic definition, axiomatic definition of Boolean algebra, basic theorem and properties of Boolean algebra, canonical and standard forms, other logic expressions.	8	1
2	Combinational Logic	Gate- Level Minimization: K-Map, don't care conditions, NAND and NOR implementation, Quine Mc-Clusky method (Tabular Method) Combinational Logic: Combinational circuits, Analysis procedure, design procedure, binary adder subtractor, decimal adder, binary multiplier, magnitude comparator, decoder, encoder.	8	2
3	Sequential Circuits	Latches, Flip-Flop, Shift Registers, Counters: Synchronous and Asynchronous sequential circuits.	8	3
4	Asynchronous Sequential Logic	Analysis Procedure: circuit with latches, design procedure, reduction of state and flow table, race Free State assignment, Hazards.	8	4
5	Memory	ROM: PROM, EPROM & EEPROM RAM: SRAM & DRAM PLD: PLA, PAL & FPGA	8	5

Effective from Session: 2020	Effective from Session: 2020-21													
Course Code	CS208	Title of the Course	DATA STRUCTURE USING C LAB	L	T	P	C							
Year	II	Semester	III	0	0	2	1							
Pre-Requisite	None	Co-requisite	None											
	1. To develop skills to design and analyze simple linear and nonlinear data structures.													
	2. To design and implement various data structure algorithms.													
Course Objectives	3. To	introduce various techni	iques for representation of the data in the real world.											
	uitable data structure for the given real-world problem.													
	5. To	write algorithms for sol	ving problems with the help of fundamental data structures.											

	Course Outcomes											
CO1	Able to handle operations like insertion, deletion, traversing mechanism etc. on various data structures.											
CO2	Able to implement the stack, Queue and their applications											
CO3	Able to implement different types of trees and Binary Tree Traversal.											
CO4	Able to implement different Sorting and Search methods.											
CO5	Able to perform basic operations (creation and traversal) on graphs and determine minimum spanning tree.											

S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	To implement traversing, insertion and deletion in arrays.	2	1
2	To implement, addition, Multiplication of Two sparse Matrices.	2	1
3	To implement insertion, deletion and pattern matching of a substring in a given string using linked list.	2	2
4	To implement Insertion and deletion in Singly Linked List at Given Location as well as for a Given Item in sorted List.	2	2
5	To Implement Insertion and deletion in Circular Linked List.	2	3
6	To implement insertion and Deletion in Stack and Queue using arrays and pointer.	2	3
7	To implement Fibonacci Series and Tower of Hanoi Using Recursion.	2	4
8	Creation of Trees and Tree Traversal Algorithms: Recursive and Non-Recursive.	2	4
9	Creation of Graphs and Graph Traversal Algorithms.	2	5
10	Sorting: a) Insertion Sort b) Quick Sort c) Merge Sort d) Bubble Sort e) Heap Sort	2	5
11	Implementation of Sparse Matrix and Polynomial using Link list.	2	5

Effective from Session: 2020)-21											
Course Code	CS271	Title of the Course	OBJECT ORIENTED CONCEPT USING JAVA LAB	L	T	P	C					
Year	II	Semester	III	0	0	2	1					
Pre-Requisite	None	Co-requisite	None									
	To learn the basic concepts and syntax of object-oriented programming.											
G 011 11	• To be able to develop logics which help them to create programs and applications using java language.											
Course Objectives		learn the use of exception										
		learn the use of methods	·									
	• Aft	er learning the object-or	riented programming, they can easily create desktop-based p	rojects	S.							

	Course Outcomes
CO1	Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
CO2	Read and make elementary modifications to Java programs that solve real-world problems.
CO3	Validate input in a Java program.
CO4	Identify and fix defects and common security issues in code.
CO5	Document a Java program using Javadoc.

S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	Create a class named 'Student' with String variable 'name' and integer variable 'roll_no'. Assign the value of roll_no as '2' and that of name as "John" by creating an object of the class Student.	2	1
2	Print the average of three numbers entered by user by creating a class named 'Average' having a method to calculate and print the average.	2	1
3	Write a program that would print the information (name, year of joining, salary, address) of three employees by creating a class named 'Employee'.	2	2
4	Write a program to print the area and perimeter of a triangle having sides of 3, 4 and 5 units by creating a class named 'Triangle' with constructor having the three sides as its parameters.	2	2
5	Create a class called 'Matrix' containing constructor that initializes the number of rows and number of columns of a new Matrix object. The Matrix class has the following information: a. number of rows of matrix b. number of columns of matrix c. elements of matrix in the form of 2D array	2	3
6	Write a program to print the names of students by creating a student class. If no name is passed while creating an object of Student class, then the name should be "Unknown", otherwise the name should be equal to the String value passed while creating object of Student class.	2	3
7	Create a class named 'Member' having the following members: Data members 1. Name 2. Age 3. Phone number 4. Address 5. Salary It also has a method named 'print Salary' which prints the salary of the members. Two classes 'Employee' and 'Manager' inherits the 'Member' class. The 'Employee' and 'Manager' classes have data members 'specialization' and 'department' respectively. Now, assign name, age, phone number, address and salary to an employee and a manager by making an object of both of these classes and print the same.	2	4
8	Create a class with a method that prints "This is parent class" and its subclass with another method that prints "This is child class". Now, create an object for each of the class and call 1. method of parent class by object of parent class 2. method of child class by object of child class 3. method of parent class by object of child class	2	4
9	Write a program to perform inheritance where animal is the superclass and cat is the subclass.	2	4
10	Write a java program to calculate the average value of array elements where array elements are {20,30,25,25, -16,60, -100}	2	5
11	Program to calculate any shape area while using Encapsulation.	2	5
12	Program to perform Overloading by changing datatypes of parameters.	2	5

Effective from Session: 2020	0-21											
Course Code	CS272	Title of the Course	Python Programming LAB	L	T	P	C					
Year	П	Semester	III	0	0	2	1					
Pre-Requisite	None	Co-requisite	None									
	1. To build a strong foundation of python and its IDEs.											
	2. Study of various object-oriented programming constructs and data structures available in Python.											
Course Objectives	3. Wr											
	4. De	veloping file handling ap	oplications.									
	5. Exp	oloring the use of librari	es in developing real-world applications.									

	Course Outcomes
CO1	Install and configure python and its IDEs.
CO2	Write basic programs using the various data structures provided in python.
CO3	Develop small modules and components using object-oriented methodology.
CO4	Use the libraries and develop file handling applications.
CO5	Develop some working applications using python.

S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	Understanding Python installation and its Integrated Development Environments (IDEs).	2	1
2	Write a program to illustrate various data types & concepts of variables/Constant in Python.	2	1
3	Write a program to perform different Arithmetic Operations on numbers in Python (Addition, Subtraction, Multiplication, Division, etc.)	2	1
4	Write a program in python to demonstrate the concept of "Loop" and print the following pattern of prime numbers if input is number of lines. e.g.; if n=3, output should be:	2	1
5	Write a program to implement the concept of "List" (create, append, and remove lists in python).	2	2
6	Write a program to search an input number in a list of n numbers and print a "YES" along with its position (index) otherwise print a "No".	2	2
7	Write a program to create, concatenate and print a "String" and accessing sub-string from a given string.	2	2
8	Write a program to demonstrate working of "Tuples" in python.	2	2
9	Write a program to illustrate the working of "Dictionaries" in python.	2	3
10	Write a program to check whether input string is "Pangram" or not.	2	3
11	Write a program to find factorial of a number using "Recursion".	2	3
12	Write a program implement the concept of "Functions" in python and sort "n" numbers in ascending and descending order after taking input (Integer number) from user.	2	4
13	Write a program to define a "module" and import a specific function in that module to another program.	2	4
14	Write a program that reads an input text "File" and prints all of the unique words in the file in (alphabetical order).	2	4
15	Write a program that depicts the implementation of Python "Class" which reverse a string word by word.	2	4
16	Write a python script to print the current date in the following format "Sun May 29 02:26:23 IST 2017"	2	5
17	Write a Python class to implement pow (x, n)	2	5
18	Write a program to implement the working of "NumPy" in python.	2	5

Course Code	CS 212	Title of the Course	Database Management System	L	T	P	C
Year	II	Semester	IV	3	1	0	4
Pre-Requisite	None	Co-requisite	None				
Course Objectives	the To bas To log To rec	Entity-Relationship mobuild concepts of relatic SQL as a universal dademonstrate the principical design through norm provide an overview of over from deadlock.	onal data model design by writing database queries using atabase language bles behind systematic database design approaches by cov	g Relate	tional A	Algebra tual des	and

	Course Outcomes									
CO1	Explain the features of database management systems and relational database.									
CO2	Design conceptual models of a database using ER modeling for real life applications									
CO3	Create and populate a RDBMS for a real-life application, with constraints and keys, using SQL. Retrieve any type of information from a									
	database by formulating complex queries in SQL & Relational Algebra.									
CO4	Analyze the existing design of a database schema and apply concepts of normalization to design an optimal and efficient database.									
CO5	Analyze the concepts of indexing, hashing, database transactions, serializability, recoverability, deadlock, and ways to recover from deadlock.									

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction	Introduction: An Overview of Database Management System, Database System Vs File System, Database System Concepts and Architecture, Data Models Schema and Instances, Data Independence and Data Base Language and Interfaces, Data Definitions Language, DML, Overall Database Structure. Data Modeling Using the Entity Relationship Model: ER Model Concepts, Notation for ER Diagram, Examples based on E-R diagram, Mapping Constraints, Keys, Concepts of Super Key, Candidate Key, Primary Key, Generalization, Aggregation, Reduction of an ER Diagrams to Tables, Extended ER Model, Relationships of Higher Degree.	9	1
2	Relational Data Model and Language	Relational Data Model and Language: Relational Data Model Concepts, Integrity Constraints: Entity Integrity, Referential Integrity, Keys Constraints, Domain Constraints, Relational Algebra, Relational Calculus, Tuple and Domain Calculus. Introduction to SQL: Characteristics of SQL, Advantage of SQL. SQL Data Types and Literals. Types of SQL Commands. SQL Operators and Their Procedure. Tables, Views and Indexes. Queries and Sub Queries. Aggregate Functions. Insert, Update and Delete Operations. Joins, Unions, Intersection, Minus, Cursors in SQL.	8	2
3	Data Base Design & Normalization	Data Base Design & Normalization: Functional Dependencies, Normal Forms, First, Second, Third Normal Forms, BCNF, Inclusion Dependences, Loss Less Join Decompositions, Normalization using FD, MVD, and JDs, Alternative Approaches to Database Design. Storage and File Structure: Overview of Physical Storage Media, File Organization, Organization of Records in File, Data Dictionary Storage.	8	3
4	Indexing & Hashing	Indexing & Hashing: Basic Concepts, B+ Tree Index Files, B- Tree Index Files, Static Hashing, Dynamic Hashing. Transaction Processing Concepts: Transaction System, Testing of Serializability, Serializability of Schedules, Conflict & View Serializable Schedule, Recoverability, Recovery from Transaction Failures, Log Based Recovery, Checkpoints, Deadlock Handling.	8	4
5	Concurrency Control Techniques	Concurrency Control Techniques: Concurrency Control, Locking Techniques for Concurrency Control, Time Stamping Protocols for Concurrency Control, Validation Based Protocol, Multiple Granularity, Multi Version Schemes, Recovery with Concurrent Transaction.	8	5

Course Code	ES 202	Title of the Course	Disaster Management	L	T	P	C		
Year	II	Semester	IV	3	1	0	4		
Pre-Requisite	None	Co-requisite None							
Course Objectives		of this course is to fam and mitigation techniqu	iliarize the students with basic management principles relaties.	ng to o	lisaster				

	Course Outcomes
CO1	Students are able to learn types of disasters and its profile in India
CO2	Students are able to understand the causes and impacts of disasters on environment
CO3	Students are able to learn about risk reduction approaches of disasters with safety issues in mitigating industrial disasters.
CO4	To understand the concept of Disaster Management Cycle and its Risk Reduction
CO5	To understand the concept of Disaster Management Cycle and its Risk Reduction

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Introduction to disaster	Concept of Disaster Management. Types of disaster and their impact: Natural and Man-made like- Earthquakes, Floods, Droughts, Cyclones, Avalanches, Forest Fires, Terrorism related disaster etc. Assessment of Human and Economic Losses.	8	1
2	Impact of Disaster	Impact of Extensive Industrialization, Impact of Global Warming and Environmental degradation, National and Global Disaster.	8	2
3	Disaster Risk Reduction	National Policy for Disaster Management, Elementary knowledge of the disaster management Act 2005. Types of Responses: Central, State, District level, People's community participation in Disaster management. Post Disaster management and Rehabilitation measures.	8	3
4	Disaster Management	Capacity building for meeting disasters. Long- term measures for prevention of Disasters. Mitigation techniques/ Strategies: Early Warning Systems, Data sharing at National and International Levels.	8	4

Course Code	MT 206	Title of the Course	Mathematical Analysis	L	T	P	C
Year	II	Semester	IV	3	1	0	4
Pre-Requisite	None	Co-requisite	None				
Course Objectives	Gain basic of	numerical integration a	aic and transcendental equations nd solution of ordinary differential equation				
	Understandin	g the concepts of binom	ial distribution, poison distribution and normal distribution.				

	Course Outcomes
CO1	Define normalization and state its consequences.
CO2	Explain various methods of numerical analysis
CO3	Demonstrate integral transformation of an equation using Fourier transformation.
CO4	Analyse correlation and regression of a coefficient.
CO5	Compare Euler's Method and Modified Euler's Method

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Errors	Bisection Method, Iteration Method, False Position Method, Newton-Raphson Method. Rate of Convergence of Methods. Solution of system of linear equations by LU decomposition method.	8	1
2	Algebraic & Transcendental Equations	Finite differences, Newton's forward & backward formula, Gauss forward and backward formula forequal intervals. Lagrange's and Newton's divided difference formula for unequal intervals, Numerical differentiation.	8	2
3	Interpolation	Numerical Integration by Trapezoidal Rule, Simpson's 1/3 Rule, Simpson's 3/8 Rule, Boole's & Weddle's Rule. Numerical solution of ordinary differential equations by Euler's Method, Modified Euler's Method and Runge-Kutta Method.	8	3
4	Numerical Integration & Solution of Ordinary Differential Equations	Analytic functions, C-R equations, Cauchy's integral theorem, Cauchy's integral formula forderivativesofanalytic functions, Conformal mapping, Bilineartransformation.	8	4
5	Integral Transform & Complex Analysis	Correlation and Regression Analysis, Definition of Probability: Classical and Axiomatic, Conditional Probability, Baye's theorem, Binomial Distribution, Poisson distribution and Normal Distribution.	8	5

Effective from Session: 2016	5-17										
Course Code	CS220	Title of the Course	DBMS LAB	L	T	P	C				
Year	II	Semester	IV	0	0	2	1				
Pre-Requisite	None	Co-requisite									
	To explain basic database concepts, applications, data models, schemas and instances.										
	To demonstrate the use of constraints and relational algebra operations.										
Course Objectives	• De	velop solutions for datab	pase applications using procedures, cursors and triggers								
	Describe the basics of SQL and construct queries using SQL.										
	To familiarize issues of concurrency control and transaction management.										

	Course Outcomes
CO1	Able to understand the basics of SQL and construct queries using SQL in database creation and interaction.
CO2	Able to using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping.
CO3	Ability to formulate queries using SQL DML/DDL/DCL commands.
CO4	Understand various advanced queries execution such as relational constraints, joins, set operations, trigger.
CO5	Able to design a commercial relational database system by writing SQL using the system.

S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	Database design using E-R Model and Normalization.	2	1
2	Write the queries for DDL, DML & DCL.	2	1
3	Write Queries using Logical Operators (=, <, > etc.)	2	1
4	Write queries using SQL operators (BETWEENAND, IN (list), LIKE, ISNULL and along with Negation expressions.)	2	2
5	Write SQL query using Character, Number, Date and Group Functions.	2	2
6	Write SQL Queries for Relational Algebra (UNION, INTERSECT and MINUS etc.)	2	2
7	Write queries for extracting data from more than one table (Equi-Join, Non-Equi Join, Outer Join)	2	3
8	Write SQL Queries for Sub queries, Nested queries.	2	3
9	Concept of COMMIT, ROLLBACK and CHECK POINTS.	2	4
10	Creation of Views.	2	4
11	Write programs by the use of PL/SQL (Procedures and Functions.)	2	4
12	High-level language extension with Cursor and with Triggers.	2	5
13	Creation of Forms & Reports.	2	5
14	Design and Implementation of the Mini Project.	2	5

Course Code	CS266	Title of the Course	Cloud Application Development Lab	L	T	P	C
Year	II	Semester	IV	0	0	2	1
Pre-Requisite	None	Co-requisite	None				
Course Objectives							

	Course Outcomes
CO1	Understand the vision of Cloud Computing from a global context.
CO2	Understand various computing options on IBM Cloud by market perspective of Cloud Computing.
CO3	Analyze architecture and implementation of APIs with services of IBM Cloud in Cloud Computing.
CO4	Integrate the Node.js application with Watson services over IBM Cloud.
CO5	Build and create state of the art architecture in Kubernetes cluster.

S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	Configuring IBM Cloud account and create an application using Cloud Foundry Service on IBM Cloud.	2	1
2	Mention all commands use in IBM cli to push an application from local system to IBM cloud environment.	2	1
3	Configuring Cloudant and managing the datasets on IBM Cloud.	2	2
4	Configuring secure a web-application with single sign-on (APP ID) on IBM cloud.	2	2
5	Create Rest API using NodeJs; Apply rest method to perform CRUD operations on resources at Server.	2	3
6	Developing NodeJs application for displaying weather information using IBM Cloud DevOps service and deploying through delivery pipeline and manifest file configuration.	2	3
7	Create Watson services. (Text to speech /speech to text)	2	4
8	Build Chatbot applications for more than one sector like: Hospital, Industry, Banking etc, using Artificial Intelligence (AI) services.	2	4
9	Create Docker container for deploying on containerized platform.	2	5
10	Implementation of container orchestration using Kubernetes.	2	5

Effective from Session: 2020)-21										
Course Code	CS282	Title of the Course	ADVANCE JAVA PROGRAMMING LAB	L	T	P	C				
Year	II	Semester	IV	0	0	2	1				
Pre-Requisite	None	Co-requisite	None								
	 To learn the basic concepts and syntax of advance java programming. 										
	• To	be able to develop logic	s which help them to create programs and applications using	g java language.							
Course Objectives	• To	learn the use of JDBC-C	DDBC.								
	To learn the use of jsp and servlet.										
	• Aft	er learning the advance	java programming, they can easily create web projects.								

	Course Outcomes
CO1	Able to understand the basic concepts of Advance java Programming.
CO2	Able to design and develop various web pages using applet.
CO3	Able to analyze and develop programs on Servlet and JSP.
CO4	Able to develop programs on different project using Swing and Bean.
CO5	Able to implement programs using JDBC-ODBC

S. No.	List of Experiments	Contact Hrs.	Mapped CO
1	Create GUI application using AWT & Applet classes.	2	1
2	Design & develop the client-server application using NET package.	2	1
3	Implement database application using JDBC package.	2	2
4	Create client server Application using RMI.	2	2
5	Introduction to Java Beans and EJB program.	2	3
6	Describe & develop Java Servlet, HTTP request and response program.	2	3
7	Create a Servlet program for cookies	2	4
8	Create application using Java Swing package.	2	4
9	Introduction to Java Server Pages and its sample programs.	2	5
10	Design program for JSP by using JSP Exception and JSP Action Elements.	2	5

Effective from Session: 2016	5-17						
Course Code	BM-226	Title of the Course	Human Values & Professional Ethics	L	T	P	C
Year	II	Semester	III	3	0	0	0
Pre-Requisite	None Co-requisite None						
Course Objectives	 professio To justif To create To inspirengineer To create 	on, y the moral judgment co e an awareness on Mana re Moral and Social Val s should display concert	that ought to guide the Management profession, Resolve the oncerning the profession. Agement Ethics and Human Values. But and Loyalty. Intended to develop a set of beliefs, attitudening morality. But an appropriate global issues: Multinational corporations - Environmental corporations - Environmental global issues:	es, and	l habits	that	uter

	Course Outcomes
CO1	Development of moral and ethical values, right understanding and relationships
CO2	Knowledge of Moral Rights and Moral rules, Moral character and responsibilities. Privacy, Confidentiality, Intellectual Property rights
	and its laws.
CO3	Awareness about the Professional Responsibility of engineers, Responsibility of engineers related to risks, hazards and safety.
CO4	Development of Engineers Ethics. Understanding of variety of moral issues, moral judgment concerning the profession.
CO5	Understanding of various of global issues; Environmental ethics - computer ethics - weapons development.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO		
1	Human Value Education	Understanding the need, basic guidelines, content and process for Value Education, Self-Exploration. Its content and process; 'Natural Acceptance' and Experiential Validation- as the mechanism for self-exploration, Continuous Happiness and Prosperity- A look at basic Human Aspirations, Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority, Understanding Happiness and Prosperity correctly.	6	CO1		
2	Introduction to Ethical Concept	Definition of industrial ethics and values, Ethical rules of industrial worker. Values and Value				
3	Professional Responsibility	The basis and scope of Professional Responsibility, Professions and Norms of Professional Conduct, Ethical Standards versus Profession, Culpable mistakes, the Autonomy of professions and codes of ethics. Employee status and Professionalism. Central Professional Responsibilities of Engineers: The emerging consensus on the Responsibility for safety among engineers, hazards and risks.	6	CO3		
4	Engineers Ethics	Senses of 'Engineering Ethics' - variety of moral issues - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy - Models of Professional Roles theories about right action - Self-interest - customs and religion - uses of ethical theories. Valuing Time - Cooperation - Commitment.	6	CO4		
5	A Glimpse of Life Stories, Global Issues	Life story of Prophet Mohammad, Mahatma Gandhi, Swami Vivekanand, Marie Curie and Steve Jobs. Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers consulting engineers as expert witnesses and advisors -moral

Effective from Session:							
Course Code	EC209	Title of the Course	Digital Electronics	L	T	P	С
Year	II	Semester	III/IV	3	1	0	4
Pre-Requisite	None	Co-requisite	None				
Course Objectives	 mathematical form. Can ident To learn the Boolean Express circuit including gates, adders To learn the analysis of variou To understand the concept and 	ify type of complements, ion, K- Map method. To , subtractor, multiplexer a is sequential circuits, flip I design of asynchronous	flops, counters and various shif	ents. of vari	ous co	mbinatio	onal

	Course Outcomes
CO1	Given a number, students shall be able to represent various conversion in mathematical form, identify type of complements, apply 1's and 2's complements and formulate conversion of any radix to decimal and decimal to any radix and solve 1's, 2's, 9's and 10's complements.
CO2	Given a Boolean Expression, student shall be able to analyze and evaluate various axioms and theorems also K- Map method. For a given Combinational circuit, student shall be able to understand its various building blocks and examine, analyze and evaluate various gates, adders, subtractor, multiplexer and encoders.
CO3	Given concept of sequential logic would be able to select suitable design of various flip flops, shift registers and counters.
CO4	Given concept of asynchronous sequential logic would be able to understand and analyze transition table, flow table, reduction of states and circuit with latches.
CO5	Given a AND and OR array, student shall be able to define various logic devices. Solve, analyze, and modify different PLD based design.

Unit No.	Title of the Unit	Content of Unit	Contact Hrs.	Mapped CO
1	Boolean algebra and Number System	Digital System and Binary Numbers: Singed binary numbers, fixed and floating-point numbers, binary codes, cyclic codes, gray codes, error detecting and correcting codes, parity check and Hamming codes. Boolean Algebra and logic gates: Basic definition, axiomatic definition of Boolean algebra, basic theorem and properties of Boolean algebra, canonical and standard forms, other logic expressions.	8	1
2	Combinational Logic	Gate- Level Minimization: K-Map, don't care conditions, NAND and NOR implementation, Quine Mc-Clusky method (Tabular Method) Combinational Logic: Combinational circuits, Analysis procedure, design procedure, binary adder subtractor, decimal adder, binary multiplier, magnitude comparator, decoder, encoder.	8	2
3	Sequential Circuits	Latches, Flip-Flop, Shift Registers, Counters: Synchronous and Asynchronous sequential circuits.	8	3
4	Asynchronous Sequential Logic			4
5	Memory	ROM: PROM, EPROM & EEPROM RAM: SRAM & DRAM PLD: PLA, PAL & FPGA	8	5
